KAIST

The KAIST logo consists of the word "KAIST" in a bold, blue, sans-serif font. Below the text is a horizontal blue oval shape that tapers at both ends, serving as a shadow or underline for the text.

Class Objectives

- **Understand the basic hashing techniques based on hyperplanes**
 - **Unsupervised approach**
- **Supervised approach using deep learning**

- **At the last class:**
 - **Discussed re-ranking methods: spatial verification and query expansion**
 - **Talked about inverted index**

Review of Basic Image Search

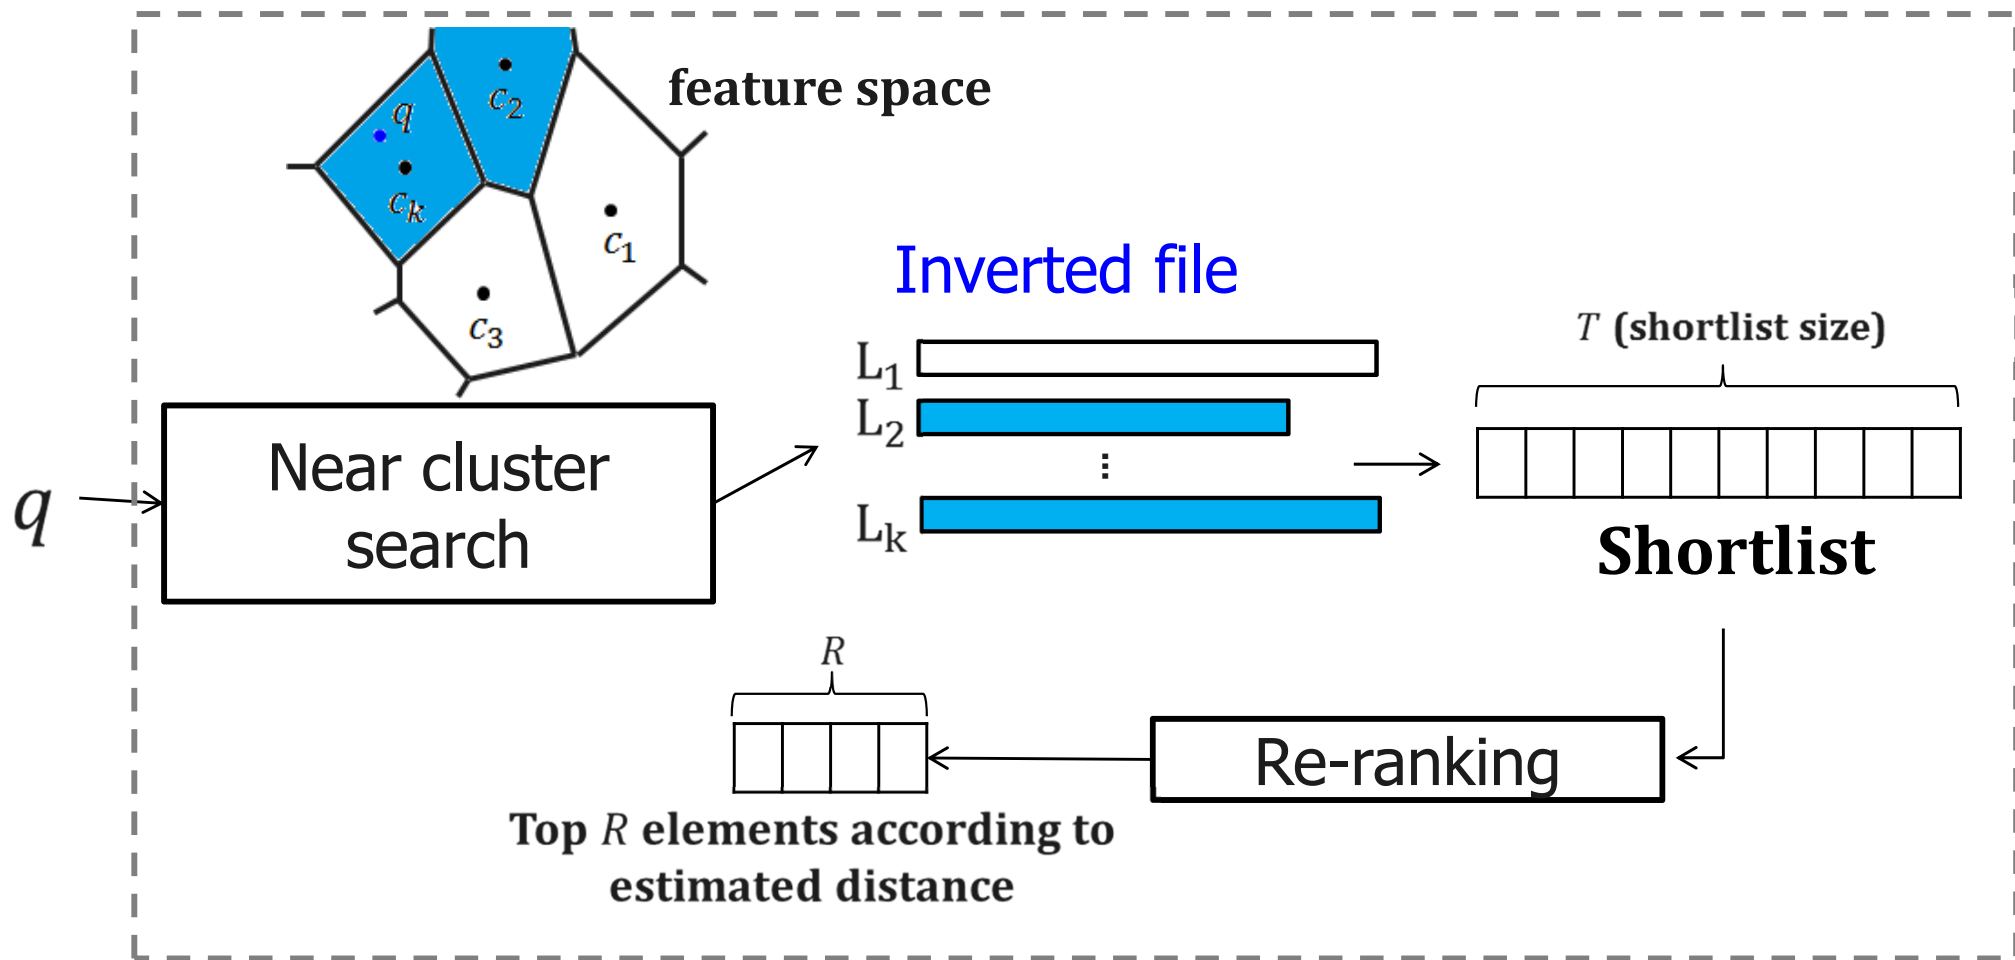

Image Search

Finding visually similar images

Image Descriptor

High dimensional point
(BoW, GIST, Color Histogram, etc.)

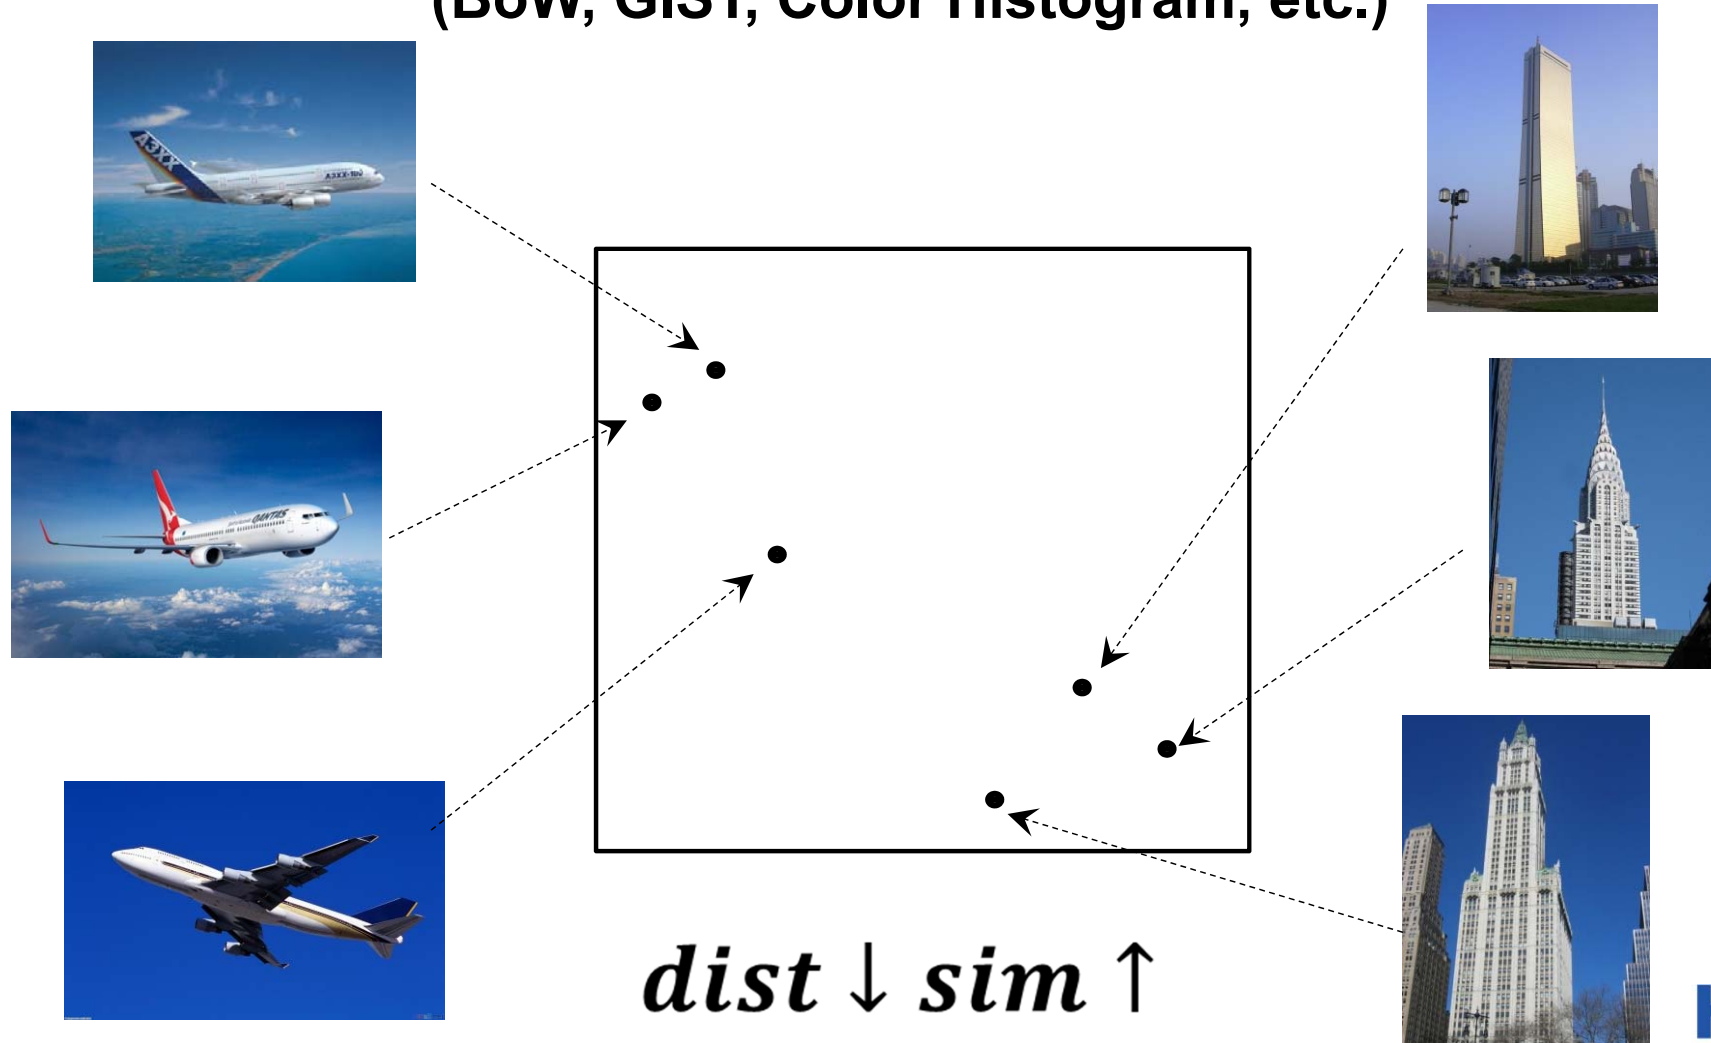

Image Descriptor

High dimensional point
Nearest neighbor search (NNS)
in high dimensional space

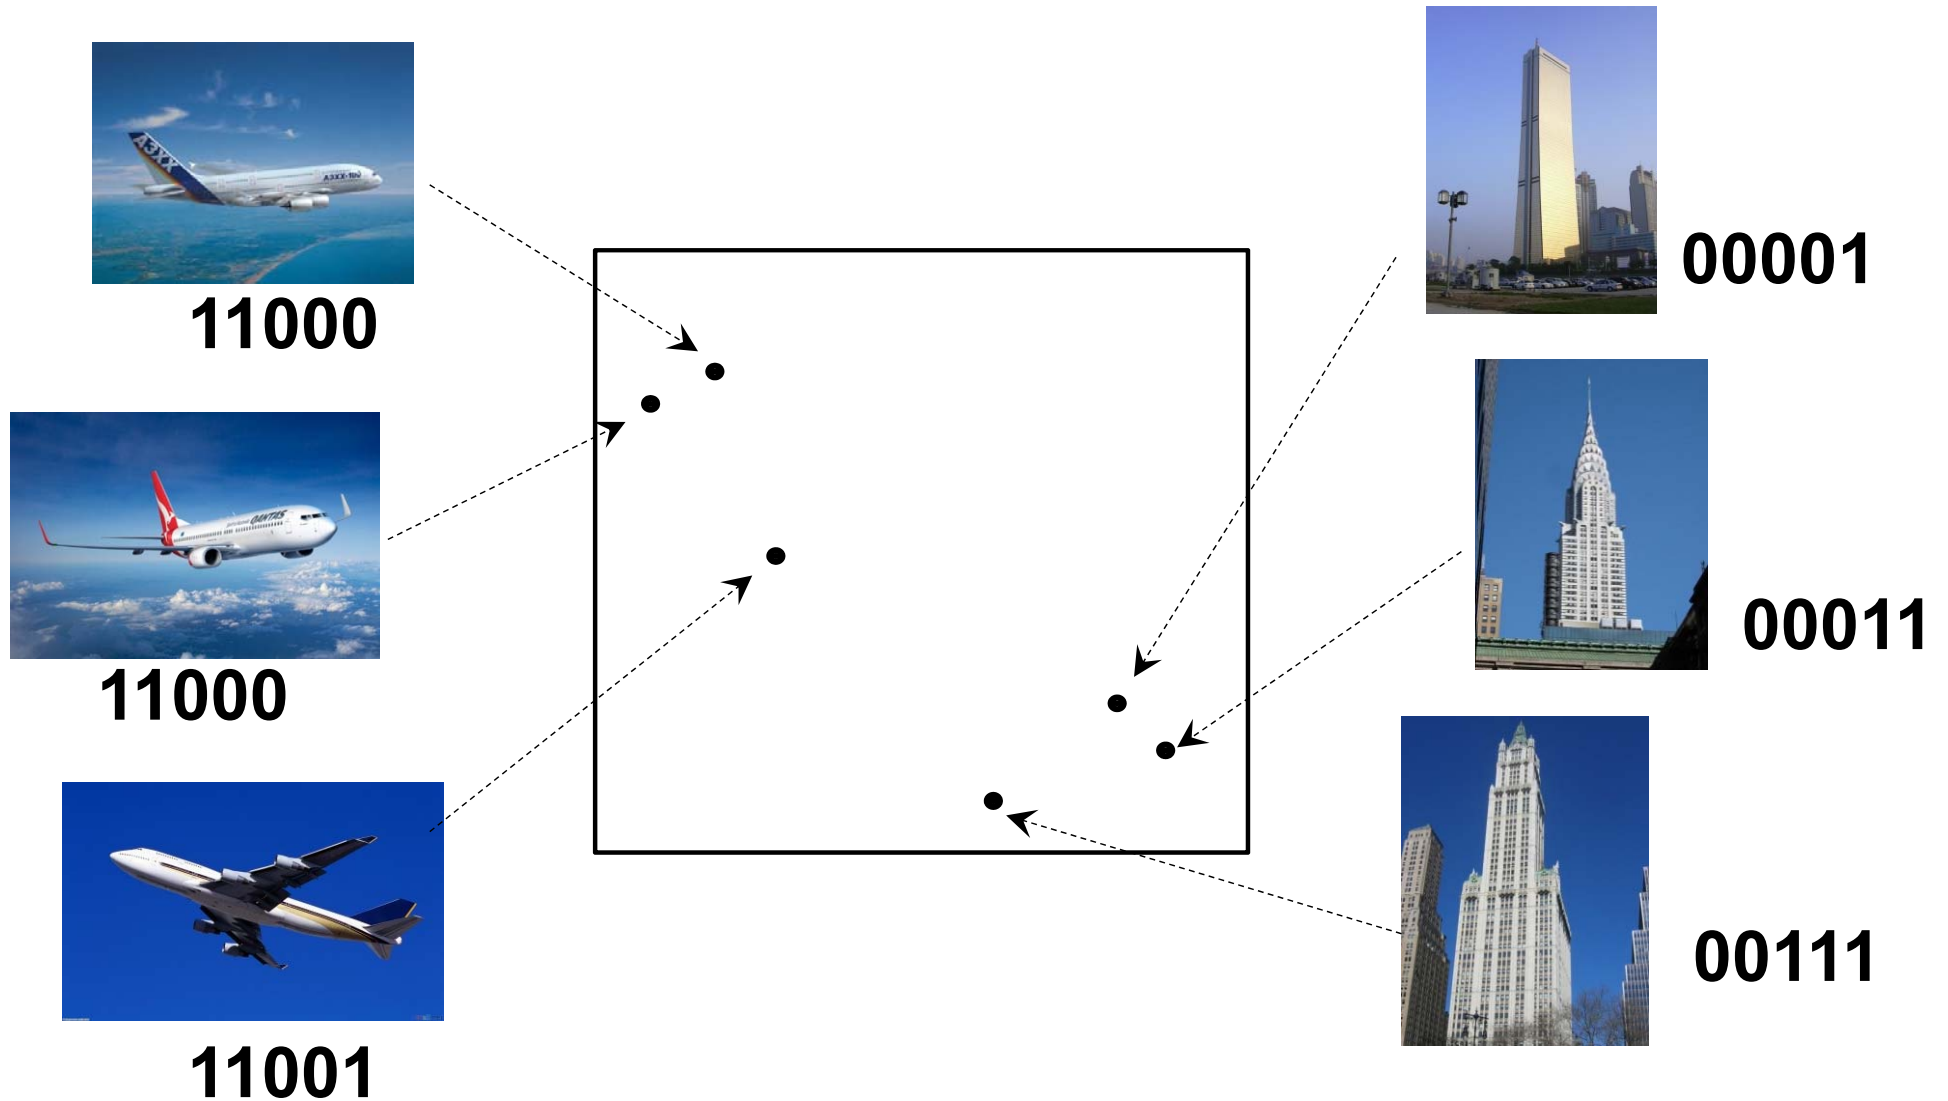

Challenge

	BoW	CNN
Dimensions	1000+	4000+
1 image	4 KB+	16 KB+
1B images	4 TB+	16 TB+

$$\frac{144 \text{ GB memory}}{1 \text{ billion images}} \approx \frac{128 \text{ bits}}{1 \text{ image}}$$

Binary Code

Binary Code

* Benefits

- Compression
- Very fast distance computation (Hamming Distance, XOR)

Hyper-Plane based Binary Coding

Hyper-Plane based Binary Coding

Distance between Two Points

- Measured by bit differences, known as Hamming distance
- Efficiently computed by XOR bit operations

$$d_{hd}(b_i, b_j) = |b_i \oplus b_j|$$

Good and Bad Hyper-Planes

**Previous work focused on
how to determine good hyper-planes**

Components of Spherical Hashing

- **Spherical hashing**
- **Hyper-sphere setting strategy**
- **Spherical Hamming distance**

Components of Spherical Hashing

- **Spherical hashing**
- Hyper-sphere setting strategy
- Spherical Hamming distance

Spherical Hashing [Heo et al., CVPR 12]

Spherical Hashing [Heo et al., CVPR 12]

Hyper-Sphere vs Hyper-Plane

Average of maximum distances within a partition:
- Hyper-spheres gives tighter bound!

Components of Spherical Hashing

- Spherical hashing
- **Hyper-sphere setting strategy**
- Spherical Hamming distance

Good Binary Coding [Yeiss 2008, He 2011]

1. Balanced partitioning

2. Independence

Intuition of Hyper-Sphere Setting

1. Balance

2. Independence

Hyper-Sphere Setting Process

1. Balance

- by controlling radius

$$\text{for } n(S) = \frac{N}{2}$$

2. Independence

- by moving two hyper-

$$\text{spheres for } n(S_1 \cap S_2) = \frac{N}{4}$$

Iteratively repeat step 1, 2 until convergence.

Components of Spherical Hashing

- Spherical hashing
- Hyper-sphere setting strategy
- **Spherical Hamming distance**

Max Distance and Common '1'

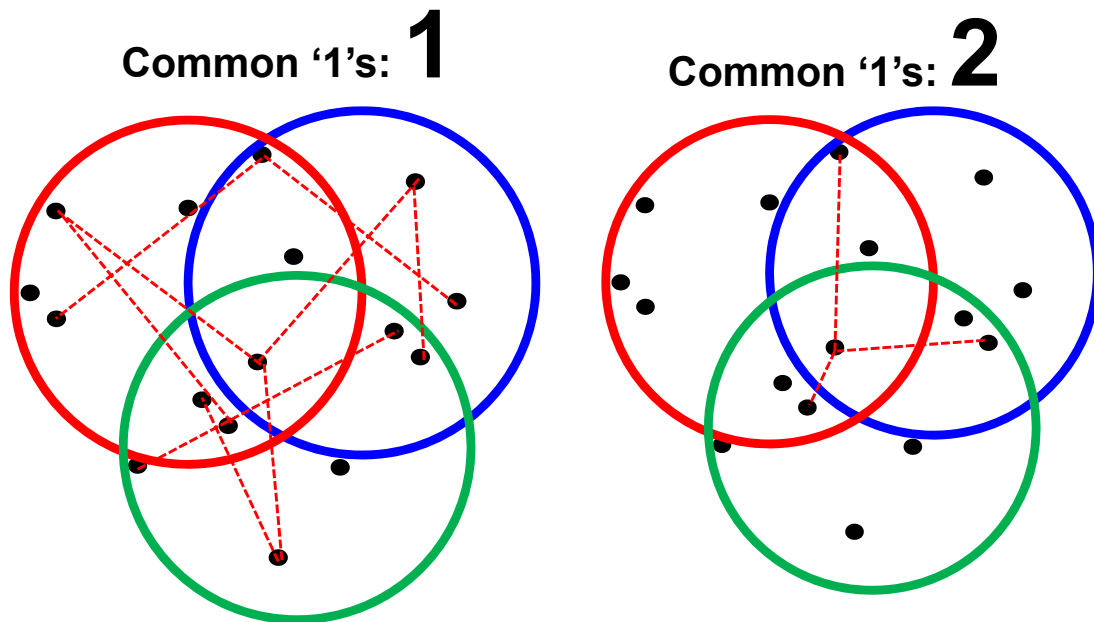

Common '1's
: 1

Max Distance and Common '1'

Common '1's
: 2

Max Distance and Common '1'

Average of maximum distances between two partitions: decreases as number of common '1'

Spherical Hamming Distance (SHD)

$$d_{shd}(b_i, b_j) = \frac{|b_i \oplus b_j|}{|b_i \wedge b_j|}$$

SHD: Hamming Distance divided by the number of common '1's.

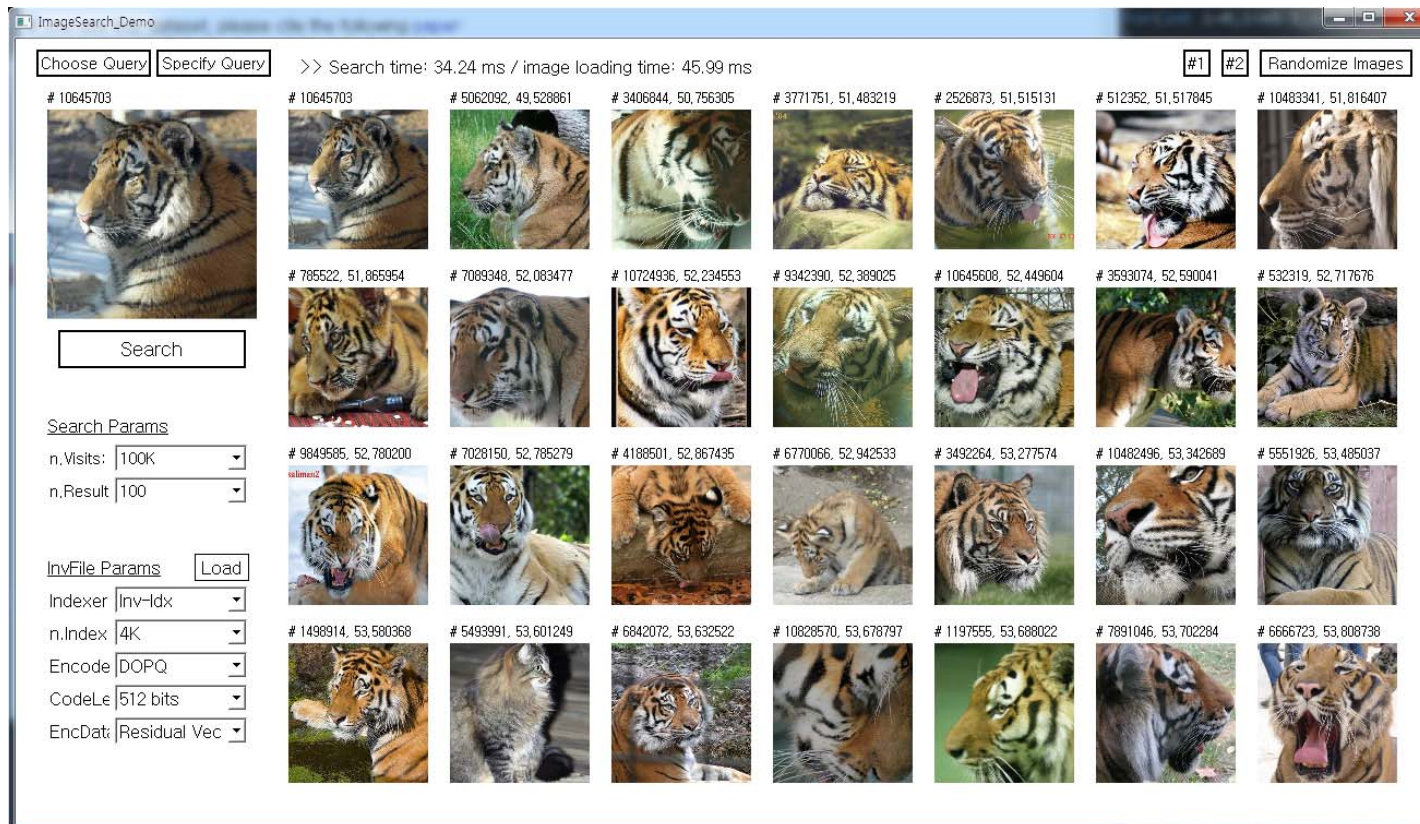

Results

384 dimensional 75 million GIST descriptors

Results of Image Retrieval

- Collaborated with Adobe
 - 11M images
 - Use deep neural nets for image representations
 - Spend only 35 ms for a single CPU thread

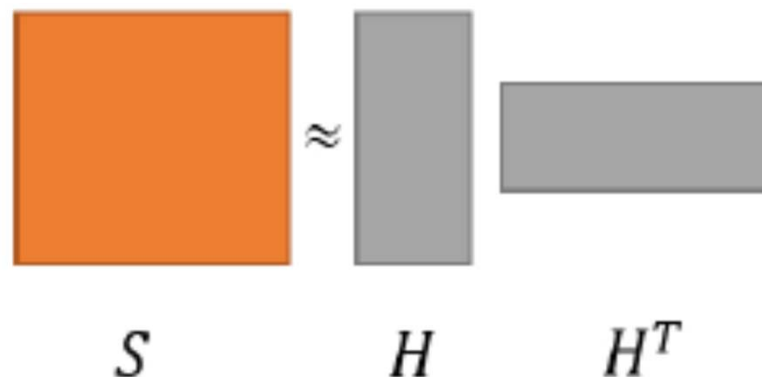

Supervised Hashing

- **Utilize image labels**
 - **Conducted by using deep learning**

Supervised hashing for image retrieval via image representation learning, AAA 14

- **First step: approximate hash codes**
 - **S (similarity matrix, i.e., 1 when two images i & j have same label)**
 - **H (Hamming embedding, binary codes): dot products between two similar codes gives 1**
 - **Minimize the reconstruction error between S and similarity between codes**

Supervised hashing for image retrieval via image representation learning, AAA 14

- **Second step: learning image features and hash functions**
 - **Use Alexnet by utilizing approximate target hash codes and optionally class labels**
 - **Once the network is trained, it is used for test images**

Class Objectives were:

- **Understand the basic hashing techniques based on hyperplanes**
 - **Unsupervised approach**
- **Supervised approach using deep learning**

- **Codes are available**

<http://sglab.kaist.ac.kr/software.htm>

Homework for Every Class

- **Go over the next lecture slides**
- **Come up with one question on what we have discussed today**
 - **Write questions three times**
- **Go over recent papers on image search, and submit their summary before Tue. class**

Next Time...

- **CNN based image search techniques**
